

Census Tract

- Census block
- CBG (one partition)
- ▭ VTD (a different partition)

Census blocks are the atomic units. CBGs and VTDs are two independent ways of grouping the same blocks: VTD 1 and VTD 4 happen to coincide exactly with CBG A and CBG D, while VTD 2 and VTD 3 cut across CBG B and CBG C. Both partitions are entirely contained within the census tract.
